Information about internal consistency of mental health questionnaire in the HESUS 2023

Item-level data for the WHO-5 and PHQ-8 questionnaires are not released for HESUS 2023 due to confidentiality concerns; hence, we were unable to compute internal consistency for our sample. Prior Spanish-language validations report internal consistency between .81-.88 for WHO-5 (Lara-Cabrera et al., 2022; López Riera et al., 2022; Lucas-Carrasco, 2012) supporting the reliability of the instrument in comparable populations and internal consistency between .83-.89 for PHQ (González-Blanch et al., 2018; Muñoz-Navarro et al., 2017) supporting the reliability of the instrument in comparable populations.
